Managing Pests | Vegetable Resources Of the major pests that plague organic vegetable production (weeds, insects and diseases), diseases are by far the most devastating in Texas. Unlike other pests the casual organisms for diseases are microscopic in nature and not visible to the naked eye. As a result, growers often rely on the occurrence of disease symptoms to detect their presence. Key Factors in Vegetable Production | Vegetable Resources Water is the life-blood of vegetable production. Vegetable crops generally require more total water and more frequent irrigation than most other agronomic crops. Few vegetables can be grown successfully under dryland conditions in most areas of Texas. Midwest Vegetable Production Guide The 2018 edition of the Midwest Vegetable Production Guide for Commercial Growers is a collaboration of land-grant universities from eight states. It provides vegetable production information that is valid in the participating states for the current year. This includes fertility, variety, cultural, and pest management recommendations.
